The Honorable Charles Holden

Birmingham

PREFACE.

THE continual fluctuation in the prices of the various articles manufactured in this town, and its neighbourhood, and the great diversity of Discounts allowed thereon, obviously point out the necessity of having some fixed rules, by which the manufacturer may be enabled to ascertain, with precision and dispatch, the advantage to be gained by himself, allowing at the same time, a certain discount to the person whom he may supply with his goods. It is true, that different methods of obtaining this knowledge has prevailed generally, for a long series of years; but no length of time, in which an erroneous system has been pursued, can justify a continuance therein, when the injurious consequences that must inevitably arise therefrom, are clearly and fully exhibited to view. That the present mode of calculating the Profits and Discounts on the manufactures of Birmingham, and its adjacencies, is exceedingly inaccurate and defective in principle, and must, if persisted in, be peculiarly prejudicial in its effects, the author of these pages persuades himself will be glaringly manifest to every candid and dispassionate person, who will give them a fair and attentive perusal.

It is greatly to be lamented, that many who undertake the tuition of youth, in the principles of Arithmetic, have themselves, too frequently, but a very superficial acquaintance therewith; and are, often, totally and egregiously ignorant of even the common rudiments of the art. Hence our surprize ceases, at the palpable errors, glaring absurdities, and almost insuperable difficulties, young persons are exposed to, and are liable to commit, on their introduction into the 'compting house. There are some, indeed, who though tolerably well informed, have, nevertheless, so tedious and laborious a process, that it not only materially retards the execution of business, but increases the burthen of expence, by rendering other assistance indispensibly necessary.

The author is sufficiently aware of the many difficulties those must encounter, who endeavour to overthrow an opinion, as it were, universally received; or to remove those prejudices,

which

which have been imbibed in education; are the more dangerous because least suspected; and owe their existence and influence, principally, to an injudicious deference for the judgement of others, or the want of a proper and spirited exertion of our own. If it were a mere speculative point for which he now contends, a thorough consciousness of his incapacity would make him extremely diffident of success. On the contrary, as the object in question is a solid and permanent good, to him clearly self-evident and indisputable, his confidence of its attainableness, rises with his conviction of its importance and utility. Whether those persons, for whose immediate advantage and convenience these tables are intended, will give them that attention they may deserve, is altogether doubtful and uncertain. If, however, a blind and obstinate adherence to a method, proved, in the face of the public, to be wholly incompetent in these complicated calculations of Profits and Discounts, should subject the manufacturers to a continuance of those losses, and almost general irregularities they must heretofore have experienced, the blame rests entirely upon themselves. The author hereof, has done his duty, in pointing out the means of prevention. The adoption or rejection of those means depends upon the will of others. To that will, whether favourable, or otherwise, he now chearfully and respectfully submits. One request only he makes, to the purchasers of his work, which is, to compare, faithfully, the calculations which it affords, with those obtained by their own private method, and he will freely abide the most rigid and invidious decision.

But as nothing tends so much, in works of this nature, to elucidate the author's meaning, and to assist the reader, as producing examples, the following is given for that purpose:

EXAMPLE.

Suppose an article cost 1£. neat money, for workmens' wages and materials, and the manufacturer wishes to gain 25 per cent. and allow a Discount of 37 and a half; he may, by referring to the Discount of the latter sum, find that the article to be sold must be charged at 2£.—The same rule must be followed in the different Discounts throughout the work.
